

School Management System (Frontend)

Overview

The **School Management System (Frontend)** is a responsive website built using **HTML and CSS**. It provides a structured interface for students, teachers, and administrators to interact with the system. This version includes only the frontend pages; backend functionality (Java Servlets + JSP + MySQL) will be added later.

Project Structure

```
SchoolManagementSystemFrontend/  
| — index.html           # Home Page  
| — about.html           # About Page  
| — contact.html         # Contact Us Page  
| — login.html           # Login Page  
| — register.html        # Registration Page  
| — dashboard.html       # Dashboard Page  
| — css/style.css        # Central stylesheet
```

Features

Home Page (index.html)

- - Welcome message
 - Navigation links to all pages
-

About Page (about.html)

- Description of the system and its purpose

Contact Us Page (contact.html)

- Contact form with fields: Name, Email, Message

Login Page (login.html)

- User login form with validation

Register Page (register.html)

- Registration form for students/teachers (Name, Age, Class, Role, Password)

Dashboard Page (dashboard.html)

- Placeholder tables for Students and Teachers
- Sample dummy data for demonstration

CSS Styling (style.css)

- Responsive design
 - Navigation bar, forms, tables, and footer styling
-

Future Enhancements

- **Backend Integration:** Java Servlets + JSP + MySQL for authentication, CRUD operations, and database connectivity.
 - **Dynamic Dashboard:** Real-time student/teacher data fetched from the database.
 - **Authentication:** Secure login and role-based access (Admin, Teacher, Student).
 - **Contact Form Handling:** Store messages in the database.
-

Technologies Used

- **HTML5** → Structure of pages
 - **CSS3** → Styling and responsiveness
 - **Java (Servlets/JSP)** → Planned backend
 - **MySQL** → Planned database
